

# REPAK

Nefab RePak is an ideal solution for returnable flows. Due to its lightweight plywood material and collapsibility ratio it ensures ease of handling and assembly. In addition to the plywood, the container is equipped with steel components to reinforce its longevity and strength for multiple uses.

## Features

Nefab's returnable/reusable packaging RePak, is designed for reasonably large returnable flows. RePak is made with a lightweight plywood material and steel hinges that provide a high collapsibility ratio and easy handling and assembly. It can easily be customized according to customer requirements and is also compliant with international phytosanitary requirements (ISPM #15).

## Benefits

- Provides very strong protection
- Suitable for difficult transports and long-term storage
- Perfect for every kind of product (heavy, sensitive, etc.)
- Ideal for returnable packaging pools
- Easy to handle and store
- Lack of nails makes for a safer work environment

## Returnable vs one-way

Comparing the Nefab RePak solution to a one-way solution, a returnable packaging system can realize significant cost savings. The RePak system exhibits outstanding durability. The packaging lasts for a long time, protecting your items under the toughest conditions. A reported lifetime of more than 100 transport cycles is not unusual under normal operating conditions.

Having a collapsible returnable packaging system allows for numerous savings through handling, transport, and storing. The general rule of thumb is that any Nefab returnable wooden container has a collapsibility ratio of 1/5 that of a standard industry wooden packaging solution.
