

EXPAK XL

Our Nefab ExPak XL, patent pending, is designed for giant volumes of up to 20 m³ (700 ft³). Quick and easy to assemble and dismantle – without a single nail – it enhances safety, allows for a quieter working environment, and offers effective packaging of extra large products.

ExPak XL

BY NEFAB

Features

Nefab ExPak XL is made of high-quality birch or pine plywood, which can be 8-12 mm thick, depending on the application. It is a packaging held together with clamps, which are mounted without tools in the pre-cut grooves. The panels can be mounted horizontally onto the base profile or angled inwards up 60°, reducing the need for additional space when packaging goods. The ExPak XL is delivered collapsed and is IPPC certified.

Benefits

- Quick to assemble and dismantle
- Nail-less, which makes for higher safety and a quieter working environment
- Space-saving, as it is delivered and stored as a flatpack
- Optimized outer dimensions to make the most of vehicle capacity in transport
- Low transport weight and volume is better for the environment than traditional solutions

“Nefab ExPak XL evolved out of our need to find a better alternative to traditional nailed wooden solutions. We wanted to develop a quick-and-easy solution with better overall economy. But, of course, safety was a key aspect. Wood and nail crates aren’t just complicated and time-consuming – nail guns and nails are potentially dangerous, too. And how can you put a price on employee health and well-being?”

Pontus Eding, Product Manager
